

IRON FOR LOST WAX WORK “STATION UNIT+ SHARP IRON THP”

GENERAL

“THP SHARP IRON” is a device especially designed for **touch-up work, shaping and finishing** in the areas of lost wax casting :

COMPOSITION

“THP SHARP IRON” is composed of :

- thermoregulated Iron **max power 40W** ensuring a significant reserve of temperature
- a removable tip annealed copper (pliable) with diam 3 mm.
- with a connector, allowing to plug to the regulating station unit with or without display the temperature.

SPECIFICATIONS

- Power supply: 24 Volts max AC or DC
- Heating coiled element “high reliability”
- Controlled by type K thermocouple
- Stainless steel heating element
- Heat-resistant and lightweight handle
- Adjustable temperature 50 to 450°c according to the regulating station unit
- possibility of regulating on a small temperature range 50 to 250°c.
- Iron weight with tip: 25 g

OPTIONAL TIPS

On this iron, we can change the copper pliable tip by hard copper tips treated in NiCr **SEE BELOW**
